## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 6, 7, 9-12 and 15 are rejected under 35 U.S.C. 102(e) as being anticipated by Gitlin et al. (U.S. Patent No. 5,880,620).

In re claims 6, 9, 11 and 15, Gitlin discloses, in a circuit comprising at least one SOI device (column 6, lines 31-32), a method for enhancing the performance of the circuit, the method comprising the steps of:

providing a pulse discharge circuit (Gitlin: "body bias control circuit") connected to at least one SOI device;

using the pulse discharge circuit to discharge any accumulated potential on a body of the at least one SOI device prior to accessing the at least one SOI device (columns 3 and 4, esp. column 4, lines 32-34).

In re claims 7, 10 and 12, Gitlin discloses the methods of claims 6, 9 and 11 respectively, wherein the circuit comprises a memory circuit (column 6, lines 7-9).

***Allowable Subject Matter***

Claims 8 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 14 and 16 are allowed.

***Response to Arguments***

Applicant's arguments filed 10/12/06 have been fully considered but they are not persuasive.

Applicant argues that the body bias control circuit of Gitlin operates as an AND circuit, not a pulse discharge circuit.

The cited distinction between the two circuits, in this case, is a difference without a distinction. Applicant's claimed "pulse discharge circuit" can and should be interpreted broadly. A "pulse" is the discharge of electric potential, which can be either turning a circuit ON or OFF. Gitlin discloses such a pulse in column 4, lines 32-34, "the second control transistor is turned on, thereby connecting the body of the pass transistor to ground." – This language is analogous to the structure and method of discharge claimed by applicant. Any other distinction must be reflected in the claims.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
